Asus transformer book remove bios password

This is very simple way to remove or reset asus portable bios password. To be honest I just needed to reset bios password a few times and it wasn't stuff to be forgotten just bought laptop with bios password installed and had to remove it and every time they had to spend hours to find place where to get the code to unlock bios. There are plenty of places where you can get the codes to reset them, but most of them only have codes for some rescue dates.. 2008-06-06 etc, that means you should set your windows date up to given date and then go into bios restore. Most of my cases there was no hard drive installed anymore it was user bios password so i wouldn't have access to windows anyway. Yes I could remove bios battery for a few minutes and that would restore bios date to very initial.. something like 2002-01-02 etc, but that means opening laptop and spending more time. How to remove Asus portable bios password easy way! Boot while pressing /holding F2 to enter the BIOS/UEFI WINDOW When the input password window appears, press Alt + r or Alt G+r will pop up the Enter Rescue Password window, with YYYY-MM-DD Now take a note of that date and go to www.biosbug.com and enter it in the search field and go there. The only thing to remember is to enter it on your laptop while reading. Also see: How to remove or reset Sony laptop bios password Click here to visit Asus Laptop Bios Reset Removal Password Fix So, I have an ASUS T300L Transformer Book. I usually put a step in my BIOS just just in case (I'm a paranoid). This time I tried to put it on, introduced it slowly to see that I present it correctly, confirmed it, was accepted. When they turn on the laptop, you don't want to accept it. Guys, just so you understand, I'm really desperate =(Is there a way to reset it (can it be dismantling somehow)? Please help! Nvm solution chosen, I guess password. It was asdfmovie xDDD But thanks for trying. Most useful answer Try this rescue password: ABLDABLA Let me know if it works :) Hello Idav2k9, Because it prevents other people from changing the settings of your PC, if you happen to leave it unattended for a short time, as if you were in a library, for example. There are some people who think it's fun to do this. Once bitten Supposing you're locked out of the operating system too and can't just use a third-party tool or change your date to use a recovery password, then use this method. It's actually easier than the comm0 with all that IMO. == Using a back door password == Here is a list of American Megatrends Inc. backsteps. A password in BIOS that always works which password you have set in BIOS. It is a master password that is used for testing and troubleshooting purposes. A.M.I. AAAMMMIII AMI?SW AMI_SW AMI BIOS CONDO HEWITT RAND LKWPETER MI ODER PASSWORD This will allow you to bypass the password. For most systems you can get the list for your use by entering the wrong password 3 times. You should see a message that says System followed by a number. Go BIOS-PW.org and enter this number to get the list of passwords for all manufacturers that match this verification page you entered. These will always work again without any issues. This method works for almost any computer, so instead of burying it here I will check if there is a guide write for it, and if I don't create one for easier access. Go to Windows and set dat to 2002/1/2 (US date format) reboot and when prompt for password hit alt+r for the type of recovery password mode when passing ALAA4ABA When I hit alt+r, my bios date keeps changing. How do I find the right password? I and thanks for the help, but in T100H with 2012/01/01 do not work ? What??? Do not work with caps, without caps, on screen, on keyboard, on external keyboard... Please help Since a BIOS administrator password is set up, you must enter this password to enter BIOS and change BIOS setup settings. Here this article will show you the way to configure or reset your BIOS administrator password on your Asus laptop/motherboard desktop computer. Step Guide: Install BIOS Manager password on Asus PC Reset/Remove BIOS Password on Asus Computer Configure BIOS Manager Password on Asus PC 1. Start/restart Asus PC, press F2 (or Esc) KEY to enter BIOS (UEFI) configuration. 2. Navigate to the Main menu, select Security. (For different PCs, the BIOS settings may differ, for some PCs, you can find the Security tab directly in the menu.) 3. Locate in Administrator Password (or Supervisor password), press Enter or click on it. Tips: The user password is the power password, if you set a user password, you must enter the password before the power is up and running. 4. Enter the password in the popup box. 5. Go out and save the change, then the next time you want to enter BIOS settings you will need to enter BIOS password. Restore/remove BIOS password on Asus computer It still remembers BIOS to enter password if you still remember BIOS by entering password, to change or remove BIOS password from the Asus computer is very easy. 1. Power on computer and press F2 (or Esc) key, and then enter BIOS password to boot into BIOS settings. 2. Find the Security menu and click Password (supervisor). 3. Enter the new password to reset BIOS password on Asus PC, or delete the textbox password, exit and save the change. You have forgotten to bios by entering password If you forgot TO BIOS by entering password, you can try the following way to open BIOS password on Asus laptop/desktop computer. 1. Start the Asus computer, login to Windows, change the date to 2001/01/02. 2. Restart the computer, press F2 (or Esc) key repeatedly, when the password text box appears, press Alt + R at the same time. 3. When the Enter Rescue Password window pops up, type the following password: ALAA4ABA, then you will enter the BIOS. Set the date and other settings. This method you have to login to Windows, if you are also locked out of Windows forgotten password, you can open your computer after this article: Locked out of Windows 10 laptop forgotten password how to open.
